JRC Dataset

UDP - Historical population, 1961 - 2011 (JRC LUISA Reference Scenario 2016)

Description:
Historical population data from 1961 to 2011, based on a project supported by the Directorate-General for Regional and Urban Policy (see Gløersen and Lüer, 2013, population data collection for European local administrative units from 1960 onwards). It contains population estimates that are not necessarily consistent with the official Eurostat figures and other projections. The data is originally available at LAU2 level and can be downloaded from Eurostat webpage. LUISA has aggregated the LAU2 level data by functional urban areas and metropolitan regions.

Other resources
Urban Data Platform
The Urban Data Platform is a joint initiative of the Directorate General Joint Research Centre (DG JRC) and the Directorate General for Regional and Urban Policy (DG REGIO) of the European Commission. It provides an access point to exchange information on the status and trends of European cities and regions. It visualizes data via maps at three different geographical units including EU-wide Cities/Greater Cities, Functional Urban Areas and Metropolitan Regions. It also includes time series graphs for selected cities, for Metropolitan Regions, and by degree of urbanisation.

LUISA Territorial Modelling Platform
The LUISA Territorial Modelling Platform is primarily used for the ex-ante evaluation of EC policies that have a direct or indirect territorial impact
