JRC Dataset

Distribution map of Pinus cembra (2006, FISE, C-SMFAv0-3-2)

Description:
This dataset series shows the distribution map (raster format: geotiff) of Pinus cembra. The distribution map is provided for Europe (EU28 plus part of other countries within the spatial extent), computed using the FISE harmonised European dataset of taxa presence/absence (based on the integration and harmonisation of the datasets by European National Forestry Inventories; BioSoil; Forest Focus/Monitoring; EUFGIS; GeneticDiversity). The distribution is estimated by means of statistical interpolation (Constrained Spatial Multi-Frequency Analysis, C-SMFA). Available years: 2006. The maps are available in the Forest Information System for Europe (FISE). FISE is run by the European Commission, Joint Research Centre. See the field Lineage for further information. When using these data, please cite the relevant data sources. A suggested citation is included in the following:  - Various authors, 2016. Geographic information:

Lineage: The data refer to the European Atlas of forest Tree Species [1]. The distribution model relies on statistical interpolation by means of constrained spatial multi-frequency analysis (C-SMFA) [2,3] as implemented by using the Mastrave modelling library [4,5] within the GNU Octave computational environment [6] and the GDAL library [7] within the Python computational environment [8]. Forest tree species presence/absence information has been used from the harmonised datasets in the Forest Information System for Europe (FISE). Dataset version: 0-3-2. References:
