Clearinghouse on Operating Experience Feedback

Description:

The core business of the CH-OEF information system is a database containing information about operating experience in nuclear power plants. This data records are complemented with the most relevant technical aspects of the related nuclear power plants and operating experience. Access to the information system is granted by the Steering Committee of the European Clearinghouse on Operating Experience Feedback for Nuclear Power Plants. Each dataset has a dedicated web-interface that can be accessed after authentication from the general menu of the website. These web-interfaces allow search, filtering of results, basic data visualisation and data export as CSV file.
