

# Dataset collection

## Raw Materials Information System (RMIS)

### Description:

The Raw Materials Information System (RMIS) contains a number of sections containing JRC produced data, including datasets on: country's raw materials trade (visualizations of trade profiles for 150 countries concerning non-energy and non-food raw materials import and export flows); raw materials' profiles (quantitative and qualitative knowledge relative to the supply chains of 15 raw materials); country profiles (country specific information related to raw materials and their supply chains for 7 countries); the raw Material System Analysis (MSA) database and the detailed Sankey diagrams (partly are accessible only with the ECAS password).
