JRC Dataset

Process steam from light fuel oil; heat plant; consumption mix, at plant; MJ (Location: FI)

Description:
Good overall data quality. Energy carrier mix information based on official statistical information including import / export. A detailed heat plant model was used, which combine measured emissions plus calculated values for not measured emissions of e.g. organics or heavy metals. Energy carrier extraction and processing data is of sufficient to good (e.g. refinery) data quality. Inventory is partly based on primary industry data, partly on secondary literature data. Technical Purpose: Process steam (MJ) at heat plant for final consumers. Geographical Representation: FI
