

JRC Dataset

Process steam from Heavy fuel oil 90 %; heat plant; consumption mix, at power plant; MJ, 90 % efficiency (Location: LT)

Description:

A detailed heat plant model was used, which combines measured emissions taken from national statistics plus calculated values for not measured emissions of e.g. simple organics or heavy metals. In general, the efficiencies are 85%, 90% and 95%. Technical Purpose: Provision of 1 MJ of process steam at heat plant for final consumers. Geographical Representation: LT
