JRC Dataset

Flood hazard map for Europe - 100-year return period

Description:
The map depicts flood prone areas in Europe for flood events with 100-year return period. Cell values indicate water depth (in m). The map can be used to assess flood exposure and risk of population and assets. NOTE: this dataset is based on JRC elaborations and is not an official flood hazard map (for details and limitations please refer to related publications).
