**JRC Dataset**

**UDP - Total GDP by metro regions, 2000 - 2060 (JRC LUISA Reference Scenario 2016)**

**Description:**
Historical (observations) data and projections (modelled) of total GDP in purchasing power parities (PPS) per metro region. Historical regional data of GVA were extracted from EUROSTAT’s online database and missing data were calculated in order to complete the historical series. Data were then converted to GDP in PPS with factors of purchasing power parities (PPPs) extrapolated from historical values from EUROSTAT. Projection data were calculated assuming a trend scenario where past regional sector growth rates converge linearly to national sector growth rates in 2035, and from 2035 onwards, each sector grows at the same pace in all regions within each country. Projections were finally rescaled in order to respect country totals from the reference DG ECFIN projections.

LUISA Territorial Modelling Platform
The LUISA Territorial Modelling Platform is primarily used for the ex-ante evaluation of EC policies that have a direct or indirect territorial impact
Urban Data Platform

The Urban Data Platform is a joint initiative of the Directorate General Joint Research Centre (DG JRC) and the Directorate General for Regional and Urban Policy (DG REGIO) of the European Commission. It provides an access point to exchange information on the status and trends of European cities and regions. It visualizes data via maps at three different geographical units including EU-wide Cities/Greater Cities, Functional Urban Areas and Metropolitan Regions. It also includes time series graphs for selected cities, for Metropolitan Regions, and by degree of urbanisation.
