JRC Dataset

UDP - Green Infrastructure per capita, 2010 - 2050 (JRC LUISA Reference Scenario 2016)

Description:
Green Infrastructure (GI) is defined as a network of high quality green spaces and other environmental features. GI includes natural and semi-natural areas, features and green spaces in rural and urban, terrestrial, freshwater, coastal and marine areas. This indicator is expressed in m² per inhabitant.

Other resources

LUISA Territorial Dashboard
The LUISA Territorial Dashboard is primarily used for the ex-ante evaluation of EC policies that have a direct or indirect territorial impact.

**LUISA Territorial Modelling Platform**

The LUISA Territorial Modelling Platform is a joint initiative of the Directorate General Joint Research Centre (DG JRC) and the Directorate General for Regional and Urban Policy (DG REGIO) of the European Commission. It provides an access point to exchange information on the status and trends of European cities and regions. It visualizes data via maps at three different geographical units including EU-wide Cities/Greater Cities, Functional Urban Areas and Metropolitan Regions. It also includes time series graphs for selected cities, for Metropolitan Regions, and by degree of urbanisation.
